About the company

St. Petersburg, English school

Proposals as to business development in cooperation with "Geropharm" company

1. Realization of the project concerned with construction of modern pharmaceutical factory in the territory of the St. Petersburg pharmaceutical cluster using the previously described land plot in cooperation with "Geropharm".
In addition, at the partner's request, "Geropharm" is ready to prepare another land plot within the cluster for pharmaceutical construction, which includes search, allocation of the land plot, and conducting the survey work. "Geropharm" has extensive experience in searching and preparing land plots for pharmaceutical production. In the hope of cooperation, the partner can save substantial time (1-1.5 years) in comparison to independent realization of these works.

2. Organization of joint production on the base of future factory using involved production floors of 2000 m². In the event of technology transfer for original preparation, the "Geropharm" is ready to produce and promote this drug in the Russian territory. Possible forms of the finished product include pre-filled syringes, pills, and other forms of the finished product at the partner's request.
3. Contract manufacturing of the drugs in the following forms: lyophilic drugs in vials, liquid drugs in vials of 2R (3 ml), 4R (5 ml), and 8R (10 ml). Thus, it is possible to quickly organize production in Russia. The drug will be considered of Russian origin and be viewed in the country preferences concerning state purchasing.
